# endless energy

The sapling matures into a tree which produces another poster

The caps are designed to protect the poster and secure it in a rolled form; they also function as a magnifier and a container for the ash

Copper wire is used to support the rolled paper

sun

The poster can be unrolled for viewing

A solar powered jacket is transformed into a renewable energy source. The solar panels provide useable electricity stored in a battery used to channel power to personal electronic devices. The regenerative cycle is perpetuated by connecting a light source to the solar panel jacket, using both energy from the sun and the ambient light to renew the energy supply.

Adjust the magnifier cap back and forth, closer and farther away, until the smallest possible dot of light is on the poster.

The poster is unrolled and placed in direct sun light

The sapling grows., its trunk supported by the copper wire

The pinlight burns the paper, turning it into ash

The ash is used to fertilze a sapling

The cap is used to collect the ash
